Introduction

Driven engineering student seeking opportunities in technology and financial based industries to acquire substantial experience within a professional work environment. I excel in STEM courses, problem solving, and technical skills like Microsoft Excel and programming. I am very adaptable and possess the ability to collaborate effectively in a group or work independently. I am prepared to put forward my utmost dedication and effort into any work I am given due to my passions within these fields.

Experience

- Present **Project Manager**, *Queen's University Algorithmic Network and Trading Team*
Currently leading a team of 5 talented Queen's students to create a binomial option pricing model which will then be used to implement a delta neutral trading algorithm.
- 2024, 2025 **IT Intern**, *Longo Brothers Fruit Markets Inc.*
Used Excel to manage IP lists from Cisco Meraki cloud, set up new networking switches and systems, provided support for IT-related issues in office/on-site, and created SOP documents for various IT related procedures. Also lead the company wide Windows 11 update roll out while maintaining Active Directory cleanliness and organization.
- 2025 **FIAM Asset Management Hackathon**, *McGill University*
Over the span of about a month, in a team of 5, myself and my teammates used AI textual sentiment analysis and a quantitative regressive model to predict stock returns and manage a portfolio. We then compared the performance of our portfolio against SPY.
- 2025 **Hackathon Developer – QHacks**, *Queen's University*
Collaborated in a 36-hour hackathon to develop *HomeSafe*, a generative AI-powered web app that guides users along the safest walking routes in Kingston, ON, using crime data and a modified A* algorithm. Built both front-end and back-end features, including a chatbot assistant and safety-aware routing engine.
- 2024 **Rotman Market Simulation Challenge**, *Queen's University*
Competed in a simulated market trading competition consisting of two cases. The first case was a manual trading case, and the second case was an algorithmic trading case. My teammate and I placed second in the competition, earning an invitation to the international challenge held by the Rotman School of Management at the University of Toronto.
- 2024 **IT Operations Member**, *Engineering Society, Queen's University*
Responsible for IT inquiries, password resets, account creation, and help desk support. Assisting with automation of tasks using Windows PowerShell.
- 2024 **Automated Movement and Object Avoidance Algorithm**, *Queen's University*
Team programming project using Python and Gazebo physics simulation software to develop an algorithm for the Queens Space Engineering Team's rover with the goal of reaching specific GPS coordinates while avoiding obstacles using LIDAR sensor data.

Education

- 2023–Present **Bachelor of Applied Science in Applied Mathematics and Computer Engineering**, *Queen's University*
GPA: 3.91
- 2019–2023 **Secondary School Diploma**, *King City Secondary School*
Grade: 94%
Awards: Ontario Scholar, Honour Roll, Technological Design Excellence Award
Activities: Robotics Club, Rotman Market Simulator

Skills

Time management • Organization • Project Management • WHMIS Laboratory Safety
• Programming (Java, C, C++, Python, MATLAB, HTML) • SQL • CAD Software •
Microsoft Excel • IT Operations • AI/Machine learning • Mathematics • Linux • Git
